

Part 7

Corrective combinations

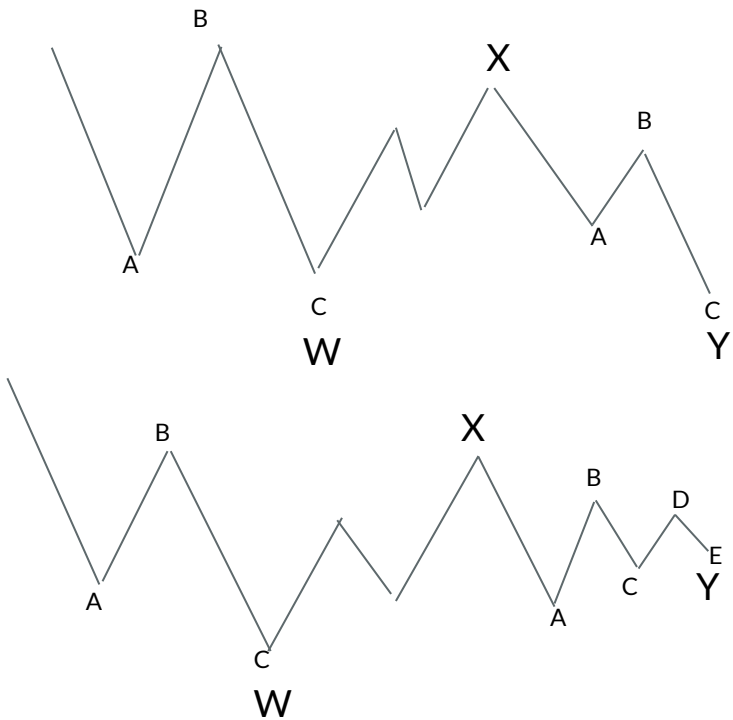

Double zig-zag

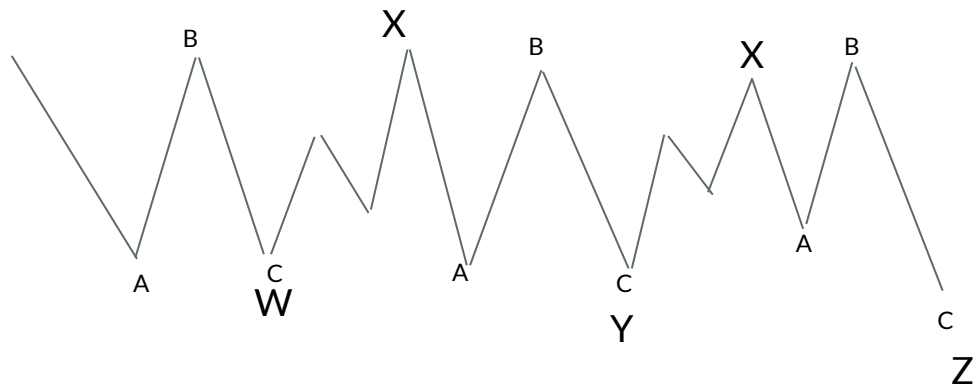

Triple zig-zag

Corrective combinations

Double Three

Triple Three (flat)

Combinations

Can appear in

- Waves 2,4 of an impulse wave
- Wave B of a zigzag
- Wave C or D of triangles

Combinations

- Double and Triple zigzags tend to have a sloped look as zigzags are more forceful
- Double and Triple three's are mostly sideways/horizontal corrections
- In a double/triple zigzag the first one is rarely big enough to correct the preceding move
- In a double/triple three the first pattern is usually enough for a targeted price correction, while the doubling/tripling only extends the duration of the process
- Wave X can take shape of any corrective structure but most common is a zigzag
- Since triangles precede the final movement of a larger trend, they are spotted as final wave in a double/triple three

Rules of Combinations

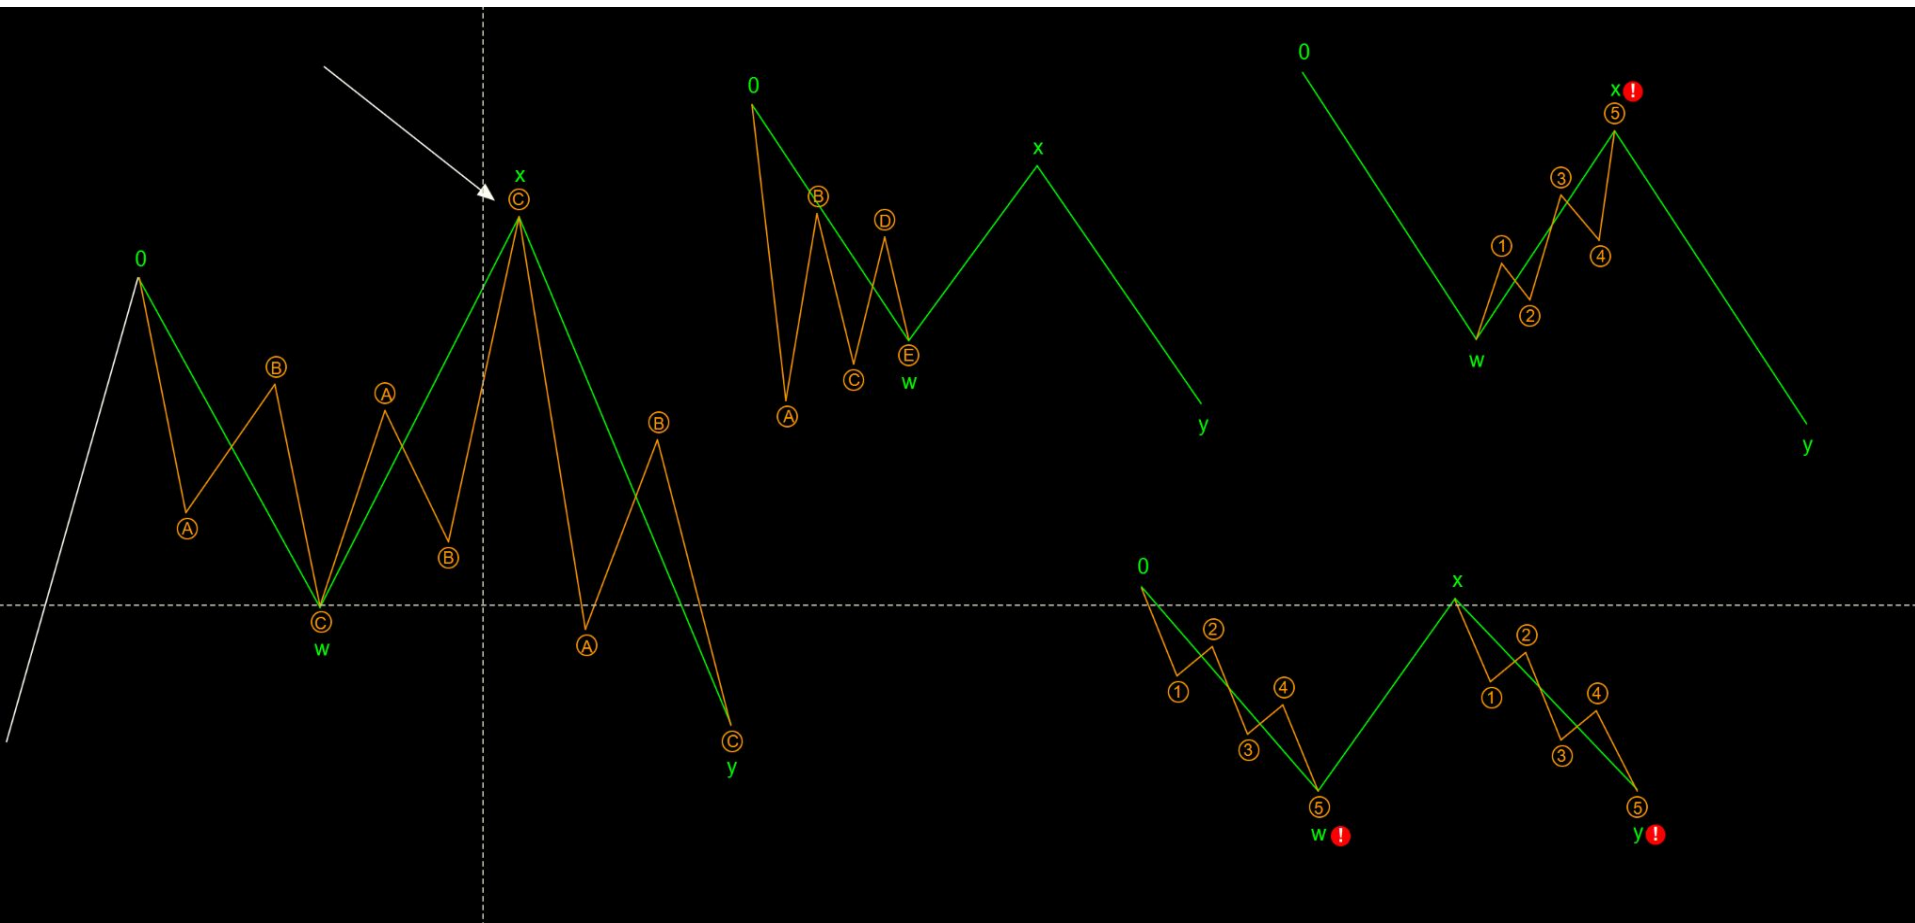

Combinations need 2 or 3 corrective patterns. They are separated by another corrective pattern in the opposite direction.

Double and triple zigzags need 2 or 3 zigzags connected by an X wave.

Double three's consist of a zigzag/flat , flat/zigzag, flat/flat, zigzag/triangle, flat/triangle . They are connected by corrective X waves.

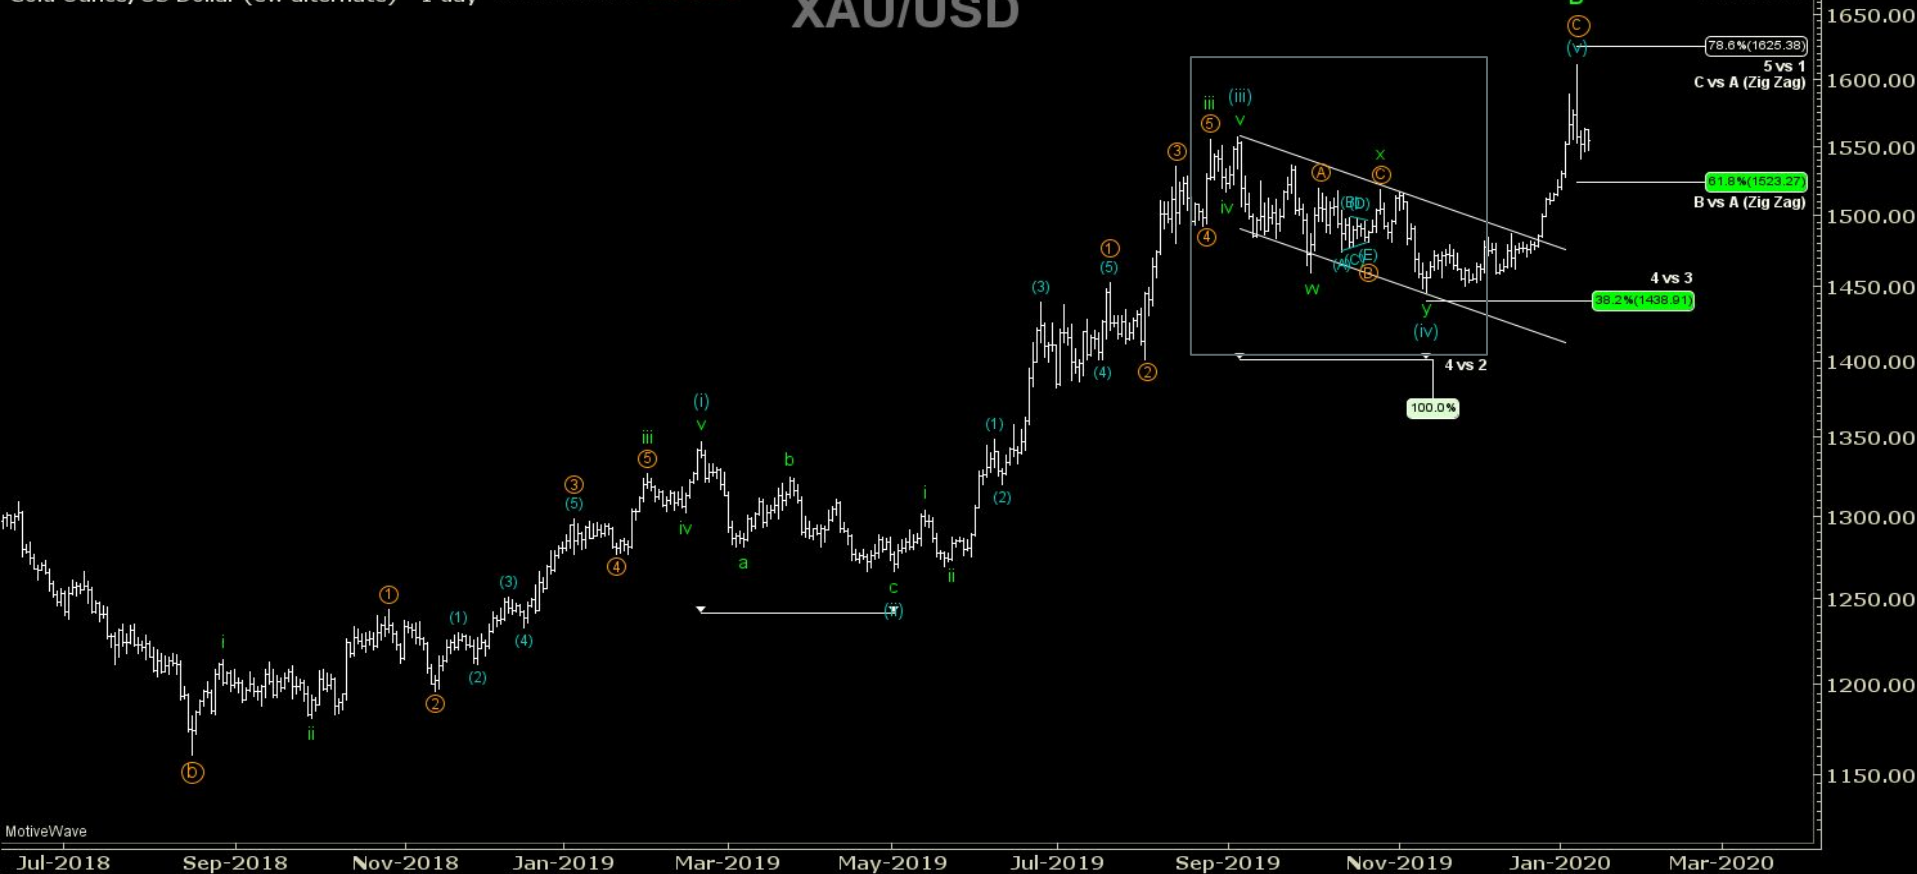

The rare triple three flat correction is comprised of 3 flats.
